BROODER GUARD FOR REARING

BROODER GUARD FOR REARING

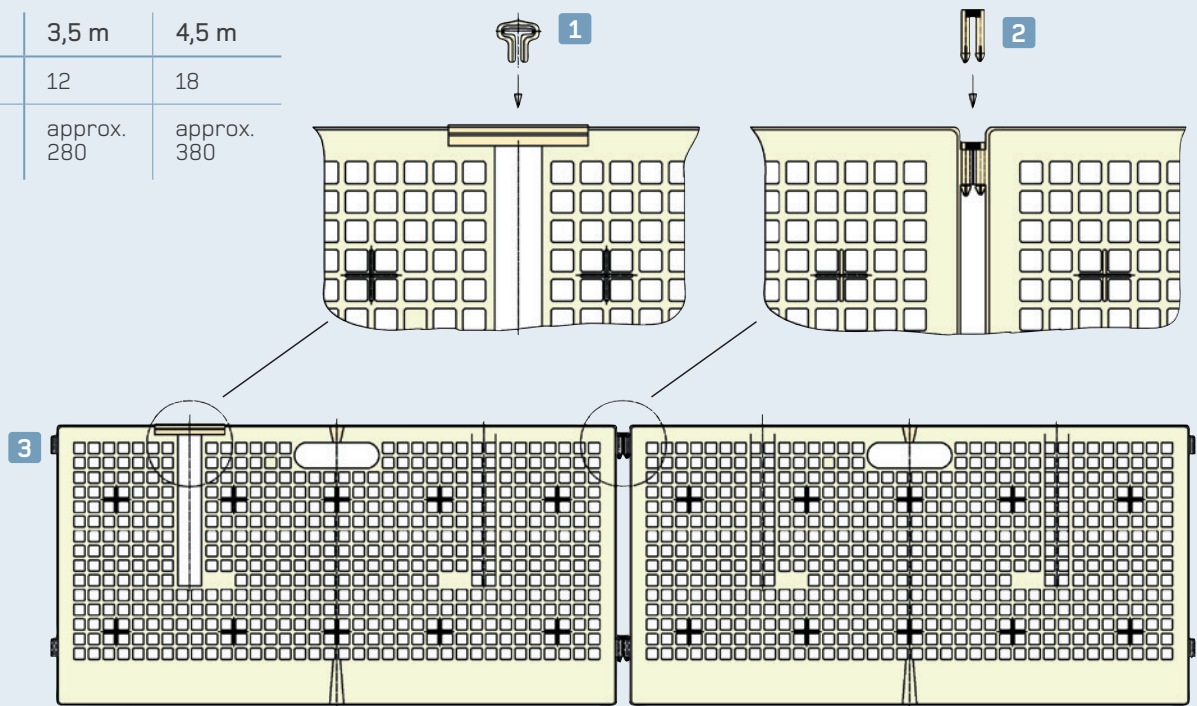

LUBING plastic brooder guards are a flexible and very durable solution for the formation of rearing groups within the house. They are joined together by connecting hinges to form rings.

ADVANTAGES

- Secure connection of the brooder guard elements at the top and bottom via connecting hinges, which allow folding during dismantling.
- Flexible and lightweight plastic segments (800 x 400 mm) allow assembly by one person.
- The integrated carrying handles enable the transport also assembled.
- Enlargement of the rearing ring complex is possible without any problems.
- Slots for the drinking lines can be easily cut with a knife at the pre-stamped separation points. For stiffening and stabilization, stabilizers are pushed onto the top edge, thus re-stabilizing the brooder guard in the area of the slot.
- The restricted view calms the animals. The shape of the grid maintains air circulation in the ring.
- After cleaning, the brooder guard can be reused practically indefinitely

LAYOUT

Ring \varnothing	3,5 m	4,5 m
Elements	12	18
Animals/ ring	approx. 280	approx. 380

- 1 Stabilizer Item 4511-09
- 2 Connecting hinges Item 4512-09
- 3 Brooder guard Item 4510-09
