**ELECTRONIC EGG
FOR
CONVEYOR-SYSTEMS**

OPTIMIZED PROCESS

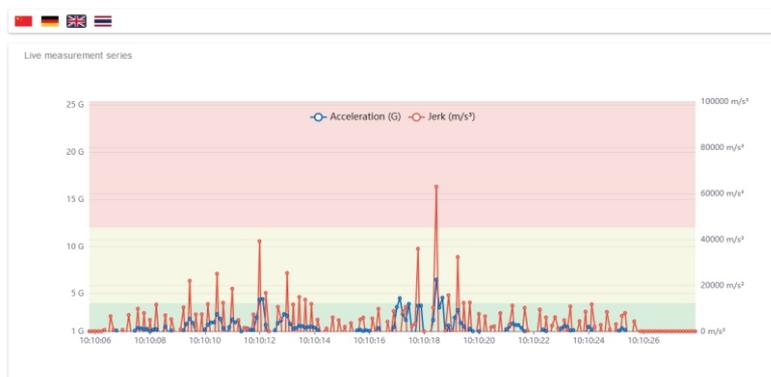

The Electronic Egg detects mechanical shocks in real time and logs the data. This allows users to quickly identify and rectify problems in Conveyor- and Sorting-Systems. The Electronic Egg improves the efficiency of the Conveyor-System, reduces egg losses, and ensures optimal transport.

Place the Electronic Egg next to the eggs on the Conveyor-System. During transport, it detects and logs mechanical shocks. If specified limits are exceeded, the LED indicators light up accordingly.

Wireless data logging & analysis

- » Records mechanical shocks in three dimensions
- » The data is stored for later analysis
- » The integrated web server allows easy access via WiFi—no software installation required
- » View data on iOS, Android, or Windows devices using any web browser
- » Export logs as PDF or CSV files for easy reporting

➤ ADVANTAGES

- » **Intuitive visualization:**
LED signals (green-yellow-red) for immediate impact detection
- » **Real-time monitoring:**
Detects shocks, vibrations, rotations, and inclinations
- » **Efficiency insights:**
Data-driven insights to increase efficiency
- » **Impact on profitability:**
Potential savings of up to €240,000 per year for a farm with 500,000 chickens by reducing the breakage rate by 1%
