**BROODER GUARD
FOR REARING**

BROODER GUARD FOR REARING

LUBING plastic brooder guards are a flexible and very durable solution for the formation of rearing groups within the house. They are joined together by connecting hinges to form rings.

LAYOUT

Ring Ø	3,5 m	4,5 m
Elements	12	18
Animals/ring	approx. 280	approx. 380

1 Stabilizer Item 4511-09

2 Connecting hinges Item 4512-09

3 Brooder guard Item 4510-09

➤ ADVANTAGES

- » Secure connection of the separating panels at the top and bottom via connecting brackets, which allow the structure to be easily folded during disassembly.
- » Flexible, lightweight plastic segments (800 × 400 mm) enable assembly by a single person.
- » Integrated carrying handles allow the assembled ring to be transported easily.
- » The rearing-ring system can be expanded without difficulty.
- » Slots for the floor drinking line can be easily cut at the pre-marked positions; reinforcement rails provide stability in the slotted area.
- » The restricted visibility calms the animals, while the lattice structure maintains proper air circulation.
- » After cleaning, the separating panel can be reused almost indefinitely.
